## Firm's History & Results

**Extant**, provides investigative coverage for the simple to most sophisticated claims matters through its strength in the insurance practice areas. The breadth of the firm's expertise and our singular focus on client services sets us apart from our competitors. Our executive team is hands-on and has over 60 years of combined industry experience. Our home office is located in Rye Brook, New York and we have eleven locations in the Hudson Valley, upstate New York, Connecticut, New Jersey and New York City.

**Extant's** history began with a partnership between, Mr. Roger Hurst, founder of Stratagem Securities, Inc. in Elmsford, New York and Oglesby's and Associates, Inc. in the late 1990's. After retiring, he remained committed to perfecting surveillance equipment in the areas of remote and aerial technologies. Together the vision was to make a bigger impact and contribution to the industry by capturing *more* fraudulent claimant activities while leveraging new technologies.

In 2012, **Extant** was created with a goal that every assignment have access to the latest variable methodologies to exceed client expectations -on *all* cases, stale, dead-end, difficult, impossible, and tried and failed cases attempted by other firms.

**Extant** produces definitive answers for the defense on WC surveillances, auto, liability cases, audits, witness location, process service or other insurance defense needs. *Our clients know that all cases have the potential for overstating and exaggerating injuries and damages, which drive up reserves and costs.* Clients get stellar field work for timely and better settlement resolutions.

Our Firm's Clients & a Day in the Life of...

Our firm's creative staged, remote, aerial, and manned surveillances reveal claimants working and performing "impressive" daily physical activities refuting their injuries and alleged disabilities.

## **PLAINTIFF'S CLAIM DISABILITIES**

**Extant**, as apart of the insurance industry, is no exception when it comes to keeping pace with state-of-the-art field technology, data scouring and surveillance tools. Corporate governance, ethical and social concerns demand that leadership within the intelligence field remain sensitive to citizen's privacy. As access to data becomes easier, it improves investigative results, however, the processes also heightens awareness for privacy, human rights, laws and liability. Utilizing remote and robotic technology improves functionality for insurance professionals in areas of fraud detection, risk assessment, human and property surveillance, as well as the first-line of response and loss prevention. Careful and covert surveilling (within the law) debunks any question of truth. **Extant** may be hired to watch someone or something, in order to prevent or detect a crime. Remote surveillance with a drone, in a technological context, is an unmanned aircraft, or aerial vehicle (UAV). There are times, when we find ourselves in rugged country terrain or areas which can not be accessed by human investigators. Remote technology then becomes the best choice. Our objective is to see things from another vantage point which may demand aerial assistance. Once a we are able to secure a picture of the territory a surveillance plan is developed by a field technician and investigator specializing in robotic, unmanned crafts.

Our sensitivity and credentials, IT technicians, law enforcement training, and legal knowledge gives clients the confidence of obtaining lawful results without jeopardizing privacy, breaching integrity or creating liabilities.
